County level population by race ethicity 2010-2019

Name: SREEPRATHAP M

Organization: Entri Elivate

Overview of Problem Statement

The population by race and ethicity census data of 2010-2019 of 'US' is a collection of population of different ethnic groups like the white population, Asian population, Native American population, and so on. By predicting the major ethnic group or race population, we can identify which population of people contributes more to the country in various aspects.

Objective

To figure out major ethnic group predictions using machine learning techniques.

Data Description

Source:

County level population by race ethnicity 2010-2019

Features:

(1).fips:- State and county FIPS code,
(2).stfips:- State FIPS code,
(3).cofips:- County FIPS code,
(4).state_abbrev:- Stae abbrevation,
(5).state:- State name,
(6).county:- County name,
(7).year:- Year,
(8).pop:- Total population(all races),
(9).white_pop:- White population,
(10).black_pop:- Black population,
(11).asian_pop:- Asian population,
(12).indian_pop:- Naive American or Alaska native population,
(13).pacific_pop:- Native Hawaiian or other Pacific islander Population,
(14).two_pop:- Tow or more races population,
(15).not_hisp_pop:- Non-Hispanic population (independent of race),
(16).hisp_pop:- Hispanic population(independent of race)

Data Collection

In [7]:
```python
# importing library
import numpy as np
import pandas as pd
```

In [8]:
```python
# Reading downloaded Dataset from loacl directory
data = pd.read_csv('US_county_census_est_race_eth_2010_2019.csv')
# Converging Data to panda DataFrame
df = pd.DataFrame(data)
```

In [9]:
```python
## For result and title printing, create a custom definition.
def print_title(title):
    print(f'\n{'-'*60}\n\033[1m{title}\033[0m')
def print_section(title):
    print(f'{'-'*60}\n{title}\n{'-'*60}')
```

In [10]:
```python
df.head(3)
```

Out[10]:

	FIPS	STFIPS	COFIPS	state_abbrev	state	county	year	pop	white_pop	black_pop	asian_pop	indian
